

Kenny's 20 Space facts

- The Milky Way contains 200 billion stars
- The Solar System has 8 planets
- The Solar System is shaped like an egg
- Mercury's diameter is 4878km
- It's thought that the Big Bang was 13.8 billion years ago
- The gravity of the moon is 0.7 of the Earth's
- It takes 3 hours to reach the moon in a rocket
- You can fit 64 planets the same size as Earth into Uranus
- 377000 after the Big Bang atoms formed
- 200,000,000 years after the Big Bang, the first stars form
- 500,000,000 years after the Big Bang, the first galaxies form
- The surface of the moon is roughly the same size as Africa
- There's no wind on the moon
- Neptune is the furthest planet from the Sun
- If you got sucked into a black hole then your body gets crushed from all sides then get stretched
- Here are some constellations from Winter: Hydra, Lynx, Lepus, Monoceros, Cetus and Draco
- Every season the constellations change
- Titan is Saturn's largest moon
- Venus' surface is 460 degrees
- Mars' red colour comes from the iron oxide

Mnemonic

Mercury Venus Earth Mars Jupiter Saturn Uranus Neptune

My Vegetarian Emu Makes Jam Splendidly Under Nuts
